

Akash Pillai

Masters Student at Texas A&M University

akash.pillai.0810@gmail.com

(979) 739-9310

EDUCATION

Texas A&M University, College Station, TX

Master of Science in Data Science

Aug 2024 - May 2026

CMR Institute of Technology, Hyderabad, India

Bachelor of Technology in Computer Science and Engineering

Aug 2019 - Jul 2023

SKILLS

Languages: Python, Java, JavaScript, Node.js, React, Angular, SQL, HTML, CSS, Stata

Technologies: Azure, Kubernetes, Docker, Ubuntu/Linux, webMethods, Hadoop, Microsoft Office, Pandas, NumPy, PyTorch, TensorFlow, Snowflake, Big Query, LLMs, RAGs, AI Agents, MCPs, MLOps, AgentOps

EXPERIENCE

Texas A&M Institute of Data Science – Division of Research

College Station, TX

Student Assistant – Operational Data Science Lab

Apr 2025 – Present

- **Disaster Impact Estimation:** Developing models to predict the impact of hurricanes in Texas using FEMA datasets and real-time Twitter data.
- **BRD Prediction Pipeline:** Developing a computer vision data pipeline for early prediction of Bovine Respiratory Disease (BRD) in beef cattle using behavior monitoring and video analysis.

Xebia Product Engineering

Hyderabad, India

Associate Software Engineer

Jul 2023 - Jul 2024

- **webMethods:** Built Flow Services to integrate insurance APIs, boosting data-flow efficiency by 25%. Simplified migration and translation processes by leveraging Connectors, enabling cross-system communication.
- **Docker and Kubernetes:** Directed management of containerized environments using Docker and Kubernetes, with automatic resource allocation and scaling, reducing hardware usage by 60%.
- **Azure Devops:** Coordinated with CICD team to automate deployment pipelines on Azure, ensuring scalable infrastructure and reducing bugs by 30%.

coMakeIT (part of Xebia)

Hyderabad, India

Engineer Trainee

Aug 2022 - Jun 2023

- **Developer Portal:** Implemented a headless architecture website for the Developer Portal, utilized by 120+ developers weekly for API management and centralized access.
- **Connector Development:** Partnered with senior members to orchestrate creation of 10+ BPM flows, enhancing process clarity and fostering adoption across 6 teams, including DevOps and UI.
- **Web Application Development:** Interacted with clients, addressed product requirements, and efficiently resolved bugs.

PROJECTS

CurateX – Multi-Source AI Content Creator: MCP server that automates content generation—from trend mining to script, voice, and video— using Reddit, YouTube, News and OpenRouter LLMs integrated with ElevenLabs and D-ID.

NimbusNews AI Weather Reporter - DeepGram, Wav2Lip, AWS S3 and Bedrock: Transforms weather charts into video summaries using Llama 3.2 Vision, Llama 3.1 70B, Deepgram AI, Wav2Lip, and AWS/Cloudflare.

Phoenix – AI-Driven Productivity & Quest System: Built a productivity engine that transforms Gmail and Calendar events into quests using AWS Bedrock (Claude 4.5 Sonnet), with agents for planning, XP tracking, and personalized guidance.

Dr. Quick – AI Patient Intake System: Built an AI-powered tool using Streamlit, Groq, AWS, and Deepgram to automate patient intake, reduce wait times, and sync records via Notion API.

Early Detection of Alzheimer’s using blood plasma proteins: Leveraged support vector machines to build multivariable models for Alzheimer’s detection by analyzing patterns in Amyloid-based biomarkers.

AI Face Recognition Attendance Tool - Python: Innovated a computer vision-based attendance tool deploying Dlib’s CNN-based face detector, achieving high accuracy in low-light environments with minimal training data.

ACHIEVEMENTS

TAMU Datathon 2025 — Texas A&M University: Won 1st Place in the MCP Challenge and 2nd Place in the Dashboard Challenge, demonstrating strong creative thinking, rapid prototyping, and data-driven problem solving.

HackMIT25 — Massachusetts Institute of Technology: Selected as a mentor and judge, contributing technical guidance and evaluation for one of the world’s leading undergrad hackathons.

Build4Good Hackathon — Texas A&M University: Won the Grand Prize at a fast-paced 8-hour hackathon by developing an impactful solution focused on social good, showcasing teamwork, innovation, and rapid prototyping.

TAMUHack2025 — Texas A&M University: Won Best DevPost Submission at a 24-hour hackathon and secured 2nd place in the AWS Challenge through a high-impact, collaborative project.

Devjam Hackathon — CMR Institute of Technology: Led a team of 4, securing 3rd place in an overnight hackathon.
